SUMMARY

I'm an entrepreneurial-minded software engineer who will bring your organization a broad range of software engineering skills coupled with a strong business sense. My main technology interests are JavaScript (Node/React) and blockchain.

EXPERIENCE

Software Engineer
ScribeWare
Seattle, WA
July 2017 to Current

- Identify and implement features for professional service reporting software
- Develop full-stack Electron app features in TypeScript (React/MobX front end and Node.js back-end)
- Build payment-processing and file upload endpoints using Stripe and S3 and deploy to AWS lambda/API Gateway
- Convert sewer scope video platform from AWS Elastic Beanstalk to Lambda

Software Development Student
Dev Bootcamp
Seattle, WA
Jan. 2017 to May 2017

- Attended 18-week intensive software development course to further build skills in Ruby on Rails & JavaScript (React)
- Utilized agile methodology in pair programming and team projects, serving as team lead frequently
- Built communication skills through "Engineering Empathy" curriculum and daily 360 feedback

Software Engineer
Cancer Research Connect
Seattle, WA
Jan. 2016 to June 2017

- Built clinical trial search engine through self-teaching of Ruby on Rails, JavaScript, and related programming languages
- Coded data-scraping algorithm utilizing federal government API to optimize process of collecting thousands of clinical studies, filtering to hundreds relevant to project, and standardizing data
- Prepared complete project plan and managed design of all key marketing elements such as brand name, logo, and website
- Led development team in creating application that empowers people with cancer to access clinical trials through a searchable database using React from end and Rails API (http://www.crconnect.org/)

Sales & Marketing Consultant
Schall Consulting Group
Seattle, WA
Sept. 2013 to Dec. 2015

- Designed promotional forecasting model for $10M+ private label brand to optimize inventory management and enhance promotional activity
- Managed reformulation and package design process for high-volume, low-growth product line that resulted in 10%+ year-over-year sales growth
- Developed sales and marketing strategy and managed logo/package design projects for dozens of natural and organic food companies

Senior Analyst
Sage Group Networks
Seattle, WA
Oct. 2011 to Dec. 2013

- Developed pesticide, microbiological, and heavy metal quality control systems for world's largest direct-selling company
- Co-authored industry-leading business to business report, "Specialty Tea is Hot", distributed to hundreds of key decision-makers
- Analyzed cost of goods sold for dozens of clients and identified efficiency opportunities, leading to significant client cost savings

PROJECTS

Giving Group
May 2017 to Current

- Build user portal and external APIs for charitable giving application using Node.js, Stripe, AWS Lambda

EDUCATION

Dev Bootcamp
Software Development 2017

Boston College
BA Economics/Psychology 2009

SKILLS

Software Development: React, Node.js, JavaScript, TypeScript, Electron, AWS, Serverless Computing, MobX, Databases (SQL/NoSQL), Ruby, Rails
